PROFILE SUMMARY

Software Engineer with 3+ years of experience across full-stack development and enterprise software delivery. Experienced in building production applications using TypeScript, React, Next.js, Node.js and PostgreSQL, with hands-on experience in RESTful APIs, database design, authentication, CI/CD and cloud deployments. Skilled in backend development, debugging and system integration, with experience delivering client applications and contributing to enterprise systems within Agile teams.

EXPERIENCE

Accenture (Sep'25 – Present)

Software Prod & Platform Engineer

- Contribute to enterprise platform delivery supporting critical national taxation systems for the Australian Taxation Office on the PayDay Super project.
- Design and maintain manual and automated test solutions to validate backend applications, strengthening system reliability across integrated components.
- Develop and execute database queries to support validation, data verification, and structured defect investigation.
- Perform end-to-end integration testing across interconnected services and data layers to ensure workflow accuracy and system stability.
- Support debugging and root-cause analysis of production and pre-production defects, collaborating closely with developers and software engineers to resolve issues efficiently.
- Participate in code reviews and test design discussions to improve test coverage, maintainability, and regression stability.
- Operate within a disciplined agile delivery framework using Azure DevOps for sprint planning, test cycles, defect tracking, and release coordination across cross-functional teams.
- Work alongside testers, analysts, DevOps engineers, and stakeholders within structured sprint cycles to ensure aligned and predictable delivery.
- Contribute to documentation, test artefacts, and shared knowledge repositories to support maintainability and onboarding.
- Support platform improvement initiatives through automation and process refinement within enterprise delivery environments.

Webifex Labs (Jan'24 – Sep'25)

Software Engineer

- Delivered and maintained production full-stack web applications across multiple client engagements, translating business requirements into scalable frontend and backend solutions.
- Designed and implemented RESTful APIs and backend services using Node.js and Express.js, establishing structured database schemas in PostgreSQL and MongoDB to ensure consistent data integrity and long-term maintainability.
- Implemented secure authentication flows and payment integrations, strengthening application security and supporting reliable transaction processing in live environments.
- Converted Figma designs into production ready React and Next.js applications, building reusable component architectures and integrating established UI libraries to improve development efficiency and interface consistency.
- Designed, built, and managed CI/CD pipelines using GitHub Actions, automating testing, build validation, and deployment workflows to improve release stability and reduce manual intervention.
- Managed cloud deployments and environment configurations across hosting platforms, ensuring smooth release cycles and stable production environments.
- Resolved frontend and backend production issues through structured debugging and root-cause analysis, improving system reliability and reducing recurring defects.
- Conducted peer code reviews and structured testing practices, strengthening overall code quality and reducing regressions across releases.
- Contributed within agile sprint cycles, aligning development efforts through stand-ups, sprint planning, backlog refinement, and retrospectives to support predictable delivery.

Aphex Pharma Solutions (Jan'23 – Dec'23)

System Analyst

- Oversaw daily IT operations, including troubleshooting hardware and software issues, managing network connectivity, ensuring data backups, and maintaining IT infrastructure to support smooth business operations.
- Managed and administered the company's Microsoft 365 environment, including Exchange, Teams, OneDrive, and email hosting, ensuring seamless functionality, security, and compliance.
- Administered and optimised Microsoft Office Suite applications, including OneDrive, to enhance staff productivity and ensure secure file sharing and collaboration.
- Served as the website administrator, handling regular updates, performance optimisation, and content management to maintain a professional and functional online presence.
- Successfully implemented IMAP email migration to Microsoft 365, enhancing reliability and scalability of communication systems.
- Developed, maintained, and optimised internal software tools to improve workflow efficiency and automate repetitive tasks within the organisation.
- Ensured consistent brand messaging and visual identity across all marketing materials and events and reinforce the firm's reputation and recognition within the industry.

EDUCATION

Bachelor of Computer Science

Deakin University

- Major: Full-Stack Development

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java

Frontend: React, Next.js, Tailwind CSS, HTML5

Backend: Node.js, Express.js, REST APIs, NextAuth.js

Databases: PostgreSQL, MongoDB

Cloud & Hosting: AWS, Vercel, Supabase, Convex

DevOps & CI/CD: GitHub Actions, Docker, Git

Testing: Jest, Playwright

Tools: Jira, Azure DevOps, Postman, GitHub, Figma

Integrations: Stripe, Square, Resend, Sanity, Betterstack

Engineering Practices: Agile Development, Test-Driven Development, Data Structures & Algorithms, Performance Optimization

CERTIFICATIONS

Reinvention with Agentic AI

Accenture

ICAgile Fundementals

International Consortium for Agile
